

Ballistic Protection

BALLISTIC PROTECTION | BALLISTIC VEST SYSTEMS | MEDICAL SUPPLIES

OVERVIEW | Body Armor

In recent times there has been a dramatic increase in violent crime and an alarming rise of attacks directed at first responders. Now more than ever, first responders need to consider their personal safety and adopt body armor as PPE. Armor has typically been associated with tactical medics in high threat environments but first responders are realizing the critical need for protection on a daily basis.

Fire and EMS have traditionally been limited to adapting body armor originally designed for the Military & Law Enforcement, North American Rescue is now confronting this challenge by designing ballistic solutions specifically for the unique needs of the Fire & EMS community.

Soft & Hard | 2 Main Types of Body Armor

SOFT ARMOR offers critical protection against handgun threats along with the capability for extended daily wear. NAR provides an optimal over-the-uniform soft armor vest that features flexible layers of ballistic resistant materials constructed from synthetic Aramid fibers with a very high strength to weight ratio. These super strong fibers are woven into multiple layers that are stacked to create an armor panel. When a handgun bullet strikes the armor panel, it gets caught in a web of high performance fibers that stretch and disperse the impact energy causing the bullet to deform or "mushroom". This dispersion of energy not only prevents bullet perforation, but also helps minimize possible injury to underlying tissue.

HARD ARMOR is designed to provide a higher degree of protection from rifle threats. Constructed from a variety of hard ballistic-resistant materials such as ceramic, compressed UHMWPE (ultra-high-molecular-weight-polyethylene), metallic plates, or a composite of multiple materials, each of these rigid materials offer their own unique properties. The hard armor plates offered by NAR are stand-alone (no soft armor required) and multi-hit rated for armor piercing threats such as 5.56 mm "Green Tip" (M855). ▶

How Soft Armor disperses energy from a handgun projectile...

Handguns are overwhelmingly used in most violent crime while Rifles are used 58% of the time in active shooter situations.

Level IIIA soft armor is the foundation of ballistic PPE providing the most coverage against handguns. Rifle plates should be considered for use in any high threat environment.

NIJ 0101.06 Ballistic Standards

How to Choose the right **ARMOR** for YOU...

There are several key features to consider in choosing the right body armor: **Protection Level | Weight | Comfort | Mobility**, and **Cost**. It is important to choose an armor system that will provide protection but also enhance your ability to perform your job. Particularly for Fire & EMS personnel, it is critical that the system facilitates your ability to provide life saving skills and equipment.

North American Rescue offers the optimal ballistic solution designed as a system specifically for Fire & EMS personnel and the duties they must perform.

The **National Institute of Justice (NIJ)** is responsible for establishing performance standards and testing certification for body armor. The NIJ conducts two types of ballistic testing: Perforation/BackFace Signature (P-BFS) and Ballistic Limit (V50). No complete or partial perforation of the armor panel is allowed during testing. In addition, no more than 44mm (1.73 inches) of indentation is allowed into the ballistic clay backing utilized during shoot testing. The back face signature translates to the upper tolerable limits of blunt force injury to the user. The ballistic limit (V50) is the velocity at which the projectile is expected to perforate the armor 50% of the time. It is important to ensure that any armor package has been certified by an NIJ approved laboratory.

Special Threats

5.56mm "Green Tip" (M855) was designed for military use and has a steel core. It is often the cheapest and most widely available AR-15 ammo on the market today. Level III plates should be NIJ special threat tested to stop the green tip.

Level II:

Tested to stop 9mm and .357 Magnum ammunition

Level IIIA:

Tested to stop .357 SIG and .44 Magnum ammunition

Level III:

Tested to stop 7.62mm FMJ rifle ammunition

Level IV:

Tested to stop .30 cal steel core armor piercing rifle ammunition

Ballistic Armor

NAR RESPONDER BALLISTIC PPE VEST

WITH *MOLLE & Armored Cummerbund*

- Designed specifically for Fire and EMS personnel providing Level IIIA soft armor protection & MOLLE-style PALS attachment capability
- Lightweight and comfortable for a better fit that allows full range of motion
- NIJ 0101.06 Level IIIA ballistic panels designed for maximum coverage without bulk
- Fitted external plate pocket to increase comfort
- Includes Armored Cummerbund with hook and loop adjustment via front/rear kangaroo panel to reduce armor overlap. Small cummerbund option sold separately
- Optional armored lower abdomen extension provides additional coverage with MOLLE-style PALS webbing for essential gear
- Rapidly adjustable shoulder straps
- 3" x 10" Hook & Loop areas on the front & back to accommodate ID Patches (sold separately)

- The XL features 12 hand-holds and 2 built-in retention straps

First responders have increasingly become **the target of violence** in recent times.

Nationwide, **violent crime is rising** at an alarming rate, translating to a higher call volume. With the **sharp decline** in the **police presence** which has historically provided scene safety for Fire/EMS, First Responders are experiencing a **dramatic increase** in **dangerous** and **potentially violent situations** in their everyday operations. Unfortunately rescuers in the Fire/EMS arena can be perceived as just another target for potential life threatening violence along with their law enforcement counterparts.

Now more than ever, your **personal safety is paramount** in the performance of your duties. Wearing **ballistic protective equipment (BPE)** is one of the best ways **to help protect yourself** in a violent environment.

PROTECT Yourself & SAVE Lives...

Law enforcement transitioned to wearing body armor on a daily basis in the 1980s because they realized it was an essential component of their daily equipment.

It saves lives! In the same way, BPE is critical for Rescue Task Force (RTF) and Tactical Emergency Medical Service (TEMS). Fire/EMS should now consider Ballistic Protection Equipment for daily wear on any call that could result in violence or an unsafe environment.

Protecting Yourself means you can save others AND live to serve another day!
